

General Health and Longevity Overview

Program Overview:

The General Health and Longevity scan was developed for people who want personalized supplement recommendations for an overall health plan.

Tested and developed after comparing scans to common needs found in blood work analysis.

What you were scanned for:

The General Health and Longevity scan is conducted over several categories that are important for your overall health. The programs scan you against 8 different categories that help support general health objectives. Once the opportunity categories were identified, the scan simulated your body as if you were on various different supplements and dosages to determine which supplements your body responded to the best. The categories that you were scanned against are:

- | | |
|---------------------------|----------------|
| 1.) Antioxidants | 5.) Herbs |
| 2.) B Vitamins | 6.) Minerals |
| 3.) Enzymes | 7.) pH Balance |
| 4.) Essential Fatty Acids | 8.) Vitamin D |
